## THREATQUOTIENT

## The 2022 State of Cybersecurity Automation Adoption

Organizations are traveling the road to cybersecurity automation, but it is not a smooth journey.

## 97% say they have experienced problems during automation implementation.

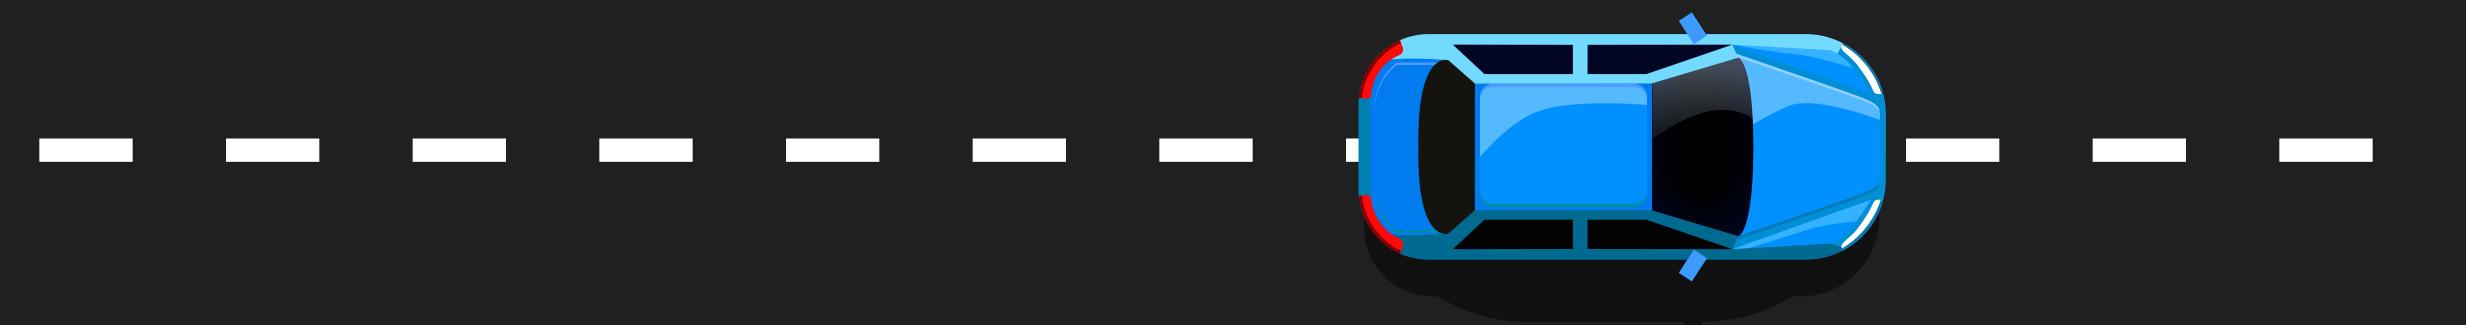

Last year the main problem was a lack of trust in outcomes for 41% of respondents, now only 14% say

## this is an issue.

A major issue moving forward is the complexity associated with **integrating technology and a shortage of skills** needed to do it.

Cybersecurity automation budgets are increasing for 98% of businesses.

68% say cybersecurity automation is important.

Increasing productivity, tackling the skills shortage, and boosting efficiency are the top three drivers for cybersecurity automation.
