

ThreatQ TDR Orchestrator

ThreatQ TDR Orchestrator is the industry's first solution to introduce a simplified, data-driven approach to SOAR, TIP and XDR that accelerates threat detection and response across disparate systems, resulting in more efficient and effective security operations.

DATA-DRIVEN

- ⚙️ All data is contextualized, Playbook run, if needed, is based on context
- ⚙️ Output is relevant and high priority, and far fewer for analysts to review
- ⚙️ Data captured for further analysis and improvement

PROCESS-DRIVEN

- ⚙️ Takes ALL data inputs and runs ALL through playbooks
- ⚙️ Report/dossier for EVERY input, requiring analyst to review each one
- ⚙️ Output NOT captured or used programmatically
