

WHOSE DATA? YOUR DATA.

At ThreatQuotient®, we believe that your data belongs to you. We shouldn't have it, nor should anyone else. With the ThreatQ® platform, no matter what deployment option you choose, you own your data and you control who has access to it. You choose what data to share and when to share it.

1

DATA HANDLING

Having your threat intelligence reside on-site expedites the data flow process. Data never leaves the internal environment which avoids exposing your critical infrastructure to an outside entity.

2

DATA CONFIDENTIALITY & SECURITY

Having all data within an on-site threat intelligence platform, customers can ensure the confidentiality of their proprietary research and sensitive intelligence. Your data always belongs to you.

3

DATA ADHERES TO CORPORATE POLICY

Follow existing corporate policy regarding access, retention and availability. Simplify the data backup process and easily roll into your existing business continuity program.

4

DATA AVAILABILITY

In a serious situation where you need to disconnect infrastructure from the outside world, have your threat data readily accessible on-site.

THREATQUOTIENT

The purposeful architecture of the ThreatQ platform allows for deployment flexibility to meet customers' needs while maintaining data security and ownership. Whether on-premises, in the cloud, as a virtual appliance or as a physical appliance, ThreatQuotient has you covered.
