

THREATQ[™] AND MCAFEE[®]

ThreatQ integrates with McAfee Threat Intelligence Exchanges (TIE) on multiple DXL fabrics using the Set and Get Reputation topic to provide information about the maliciousness of indicators.

The joint solution of ThreatQ and McAfee TIE arms security operations teams with curated intelligence for enforcement. Indicators from virtually any provider can be evaluated and then made available for McAfee Agents through DXL. Large data sets are trimmed into intelligence that matters for an organization and made available for enforcement.

THREATQ BY THREATQUOTIENT[™]

ThreatQuotient's solutions make security operations more efficient and effective. The ThreatQ open and extensible platform integrates disparate security technologies into a single security infrastructure, automating actions and workflows so that tools and people can work in unison. Empowered with continuous prioritization based on their organization's unique risk profile, security teams can focus resources on the most relevant threats, and collaboratively investigate and respond with the aim of taking the right actions faster.

MCAFEE THREAT INTELLIGENCE EXCHANGE

McAfee Threat Intelligence Exchange acts as a reputation broker to enable adaptive threat detection and response. It combines local intelligence from security solutions across your organization, with external global threat data, and instantly shares this collective intelligence across your security ecosystem, enabling solutions to exchange and act on shared intelligence.

INTEGRATION HIGHLIGHTS

Make third-party intelligence available for McAfee Agents on DXL.

Reduce and prioritize large amounts of threat intelligence to be made available for enforcement.

ThreatQ provides TIE with information about the maliciousness of indicators.

Distribute intelligence across large deployments.

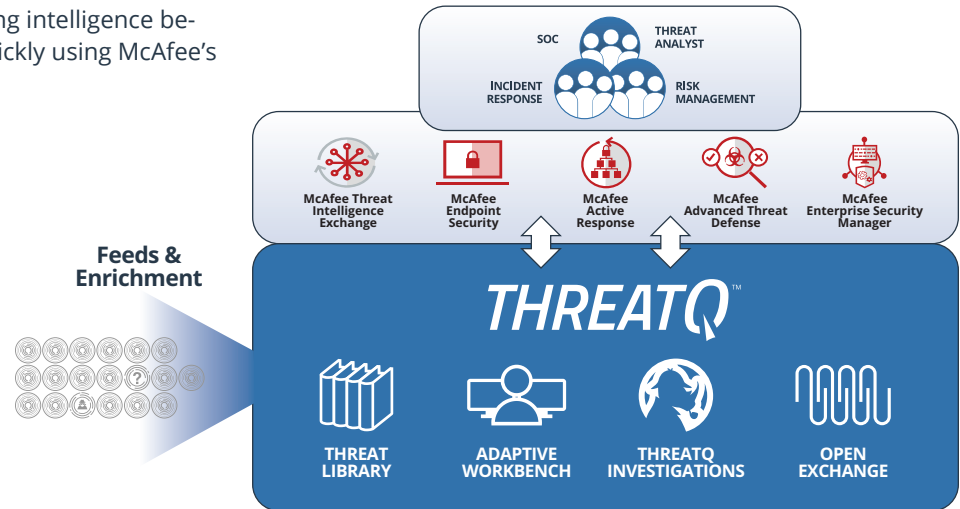

Share relevant security intelligence in real time to endpoint, gateway, network and data center security solutions.

INTEGRATION USE CASES

ThreatQ is able to index data from a variety of sources in its Threat Library™. From there, relevant indicators are reported to McAfee TIE for enforcement. Additionally, malicious indicators and context from McAfee TIE will be added to the Threat Library to contribute to the organization’s understanding of their global threat landscape.

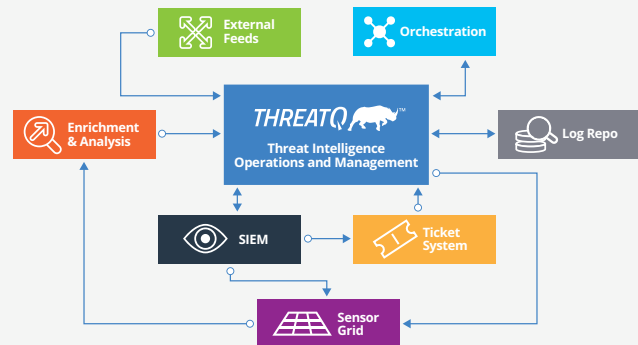

Additionally, ThreatQuotient and McAfee’s integration is used to distribute threat intelligence across large deployments with multiple DXL fabrics. This use case highlights the importance of sharing intelligence between disparate business units quickly using McAfee’s DXL and TIE.

- Business unit 1 — Business unit 1 discovers a malicious indicator locally (found out from ATD or ESM). The reputation of the newly discovered indicator is communicated to ThreatQ and it is scored high based on its associated attributes. ThreatQ publishes the indicator and reputation to TIE through DXL at sites 2 through N.
- Business units 2 through N — The reputation is now available in TIE at sites 2 through N and informs ENS locally to block the indicator across all endpoints.

OPEN EXCHANGE ARCHITECTURE

ThreatQ’s Open Exchange™ provides an extensible and flexible environment for analysts to achieve the optimal balance between system automation and expert analysis. Because no single security solution provides a silver bullet against attacks, ThreatQ’s Open Exchange architecture supports standard interfaces for ingestion and exporting, including STIX/TAXII, XML, JSON, PDF, email and other formats of structured and unstructured data, along with an SDK and APIs for custom connections.

ABOUT THREATQUOTIENT™

ThreatQuotient’s mission is to improve the efficiency and effectiveness of security operations through a threat-centric platform. By integrating an organization’s existing processes and technologies into a single security architecture, ThreatQuotient accelerates and simplifies investigations and collaboration within and across teams and tools. Through automation, prioritization and visualization, ThreatQuotient’s solutions reduce noise and highlight top priority threats to provide greater focus and decision support for limited resources. ThreatQuotient is headquartered in Northern Virginia with international operations based out of Europe and APAC.
